Cyber-security consulting

by Nikola Miloševi? - Thursday, January 10, 2019

https://inspiratron.org/cyber-security-consulting/

We offer cyber-security consulting for your business and web applications. Huge amounts of money businesses are loosing due to hacking and cyber attacks. We can help you prevent these attacks by testing your web applications on the most common and most dangerous attacks, reporting to you where are your vulnerabilities, risks and how to prevent them or fix them.

Web application testing the testing of your web application or website for possible vulnerabilities. We use both manual testing, in combination with automated tools and some of the tools utilizing artificial intelligence in order to test your web application in the best possible manner. The testing will include a comprehensive test for all vulnerabilities that are or were on any previous instance of OWASP top 10 list. The test is performed by an expert in the field who have extensive experience in the area.

The report within one month period from booking. If you need security testing, please contact us.

Apart from web application testing, we offer to create reports on cyber-security risks and generating risk assessment for your organization. For more information, please contact us.
