https://inspiratron.org/blog/2013/03/15/train-with-gameover-iso/

Today I have tried to set up GameOver.iso, one of many interesting live Linux environments that is meant to be a training tool for learning about web application security. I must admit that I like it, although I had a little problems and confusion in start. Actually it is Linux live CD that set up web server with vulnerable web applications that you can try to hack. As I had used some of the Linux distributions that are meant to be training environments like OWASP live CD, I expected also some graphical environment. Tried startx command from console, but nothing happened. Then I learned that it just starts server, and you had to access vulnerable websites from other machine via browser. Other problem I had is that I put live CD on machine on VirtualBox, but I left predefined NAT network adapter settings. You have to change it to bridge mode to be able to access virtual machine from physical by IP address. After this I was up and running with almost all training environment that exists. Let me elaborate with quotation what contains Game Over live CD:

Credits:  
Voyage Linu: GameOver has Voyage Linux as its base OS. Voyage is a minimalistic Linux distribution which is in turn based on Debian. For more information regarding Voyage Linux we encourage you to check out their website: http://linux.voyage.hk/.

Section 1 consists of special web applications that are designed especially to teach the basics of Web Security. 
Web Applications (section 1):

1. Damn Vulnerable Web Application: (http://www.dvwa.co.uk/)
3. Ghost (http://www.ghost7.net/)
5. Zap-Wave: (http://code.google.com/p/zaproxy/)

Section 1 consists of special web applications that are designed especially to teach the basics of Web Security. 
Web Applications (section 2):

5. BodgeIT: (http://code.google.com/p/bodgeit/)
6. PuzzleMall: (https://code.google.com/p/puzzlemall/)
7. WAVSEP: (https://code.google.com/p/wavsep/)

Have fun!
